For Immediate Release

Unitarian Universalist Fellowship of Topeka partners with the Climate + Energy Project to hold a Clean Power Plan Briefing
Topeka, Kansas
Wednesday, November 4, from 7-9 PM

The Clean Power Plan is the first regulation to place limits on carbon pollution from existing power plants. Released by the Environmental Protection Agency in August 2015, the rule requires each State to develop a plan to cut power plant CO2 emissions by specific targets. Each State’s reductions will contribute to the national goal to cut Greenhouse Gas emissions by 32% in 2030. The Clean Power Plan expedites the transition to clean energy through renewable energy investments and energy efficiency measures.

The Clean Power Plan will affect all Kansans, and is an important issue to follow. There are many ways that Kansas can meet the Clean Power Plan goals. How the State chooses to meet their target will directly impact the way energy is produced in Kansas. Energy generation affects the economy, the environment and public health.

To help Kansans learn more about the Clean Power Plan, the Climate + Energy Project is partnering with the Unitarian Universalist Fellowship of Topeka for a Clean Power Plan Briefing on Wednesday, November 4, from 7-9 PM at the Unitarian Universalist Fellowship of Topeka, 4775 SW 21st St., Topeka, KS 66604.

The briefing will breakdown the 1,560-page rule into a comprehensive overview:

- Clean Power Plan emission requirements and deadlines
- Ways Kansas can comply with the Co2 emission standards
- How the CPP address electricity security, availability and affordability
- Health benefits resulting from the Clean Power Plan
- Economic opportunities (jobs, incentives and credits for low income communities) resulting from the Clean Power Plan

To RSVP go to http://tinyurl.com/CPPKSBriefing or for more information on the Clean Power Plan visit climateandenergy.org or epa.gov/cleanpowerplan
